## IN THE CLAIMS

- 1 (Original). A method comprising:
- receiving an enhanced television transmission including a trigger that points to a resource and has an expires attribute indicating a trigger expiration time; and enabling the resource to be accessed after the trigger expiration time.
- 2 (Original). The method of claim 1 including rebroadcasting the enhanced television transmission.
- 3 (Original). The method of claim 1 including differencing the current time and the trigger expiration time.
- 4 (Currently Amended). The method of claim 3 including determining whether the trigger expiration time is greater than the current time and if not, discarding the trigger.
- 5 (Currently Amended). The method of claim 2 including determining whether the trigger expiration time is greater than the enhancement start time and if so, retransmitting the trigger with a trigger expiration time equal to the time when an the enhanced television transmission will be rebroadcast plus the difference between the trigger time and the enhancement start time.
- 6 (Original). The method of claim 1 including recording said enhanced television transmission for subsequent replay.
- 7 (Original). The method of claim 6 including differencing the current time and the trigger expiration time.
- 8 (Original). The method of claim 7 including determining whether the difference is greater than zero.

- . 9 (Original). The method of claim 8 wherein, if the difference is not greater than zero, discarding the trigger before recording said enhanced television transmission.
- 10 (Original). The method of claim 8 including, if the difference is greater than zero, discarding the trigger expiration time and recording the trigger.
- 11 (Original). The method of claim 1 including receiving an enhanced television transmission having a trigger that refers to a remote resource, accessing said remote resource and storing said remote resource.
- 12 (Original). An article comprising a medium storing instructions that enable a processor-based system to:
- receive an enhanced television transmission including a trigger that points to a resource and has an expires attribute indicating a trigger expiration time; and enable the resource to be accessed after the trigger expiration time.
- 13 (Original). The article of claim 12 further storing instructions that enable the processor-based system to rebroadcast the enhanced television transmission.
- 14 (Original). The article of claim 12 further storing instructions that enable the processor-based system to subtract the current time from the trigger expiration time.
- 15 (Currently Amended). The article of claim 14 further storing instructions that enable the processor-based system to determine whether the trigger <u>expiration</u> time is greater than the current time and if not, discard the trigger.
- 16 (Currently Amended). The article of claim 12 further storing instructions that enable the processor-based system to determine whether the trigger <u>expiration</u> time is greater than the enhancement start time and if so, retransmit the trigger with a trigger expiration time equal to the time when the enhanced television will be rebroadcast plus the difference between the trigger time and the enhancement start time.

- 17 (Original). The article of claim 12 further storing instructions that enable the processor-based system to record said enhanced television transmission for subsequent replay including both the television content and an enhancement accompanying said television content.
- 18 (Original). The article of claim 17 further storing instructions that enable the processor-based system to difference the current time and the trigger expiration time.
- 19 (Original). The article of claim 18 further storing instructions that enable the processor-based system to determine whether the difference is greater than zero.
- 20 (Original). The article of claim 19 further storing instructions that enable the processor-based system to discard the trigger before recording said enhanced television transmission if the difference is not greater than zero.
- 21 (Original). The article of claim 19 further storing instructions that enable the processor-based system to discard the trigger expiration time and record the trigger if the difference is greater than zero.
- 22 (Original). The article of claim 12 further storing instructions that enable the processor-based system to receive an enhanced television transmission having a trigger that refers to a remote resource, access said remote resource and store said remote resource.
  - 23 (Original). A system comprising:
    - a processor-based device; and
- a storage coupled to said processor-based device storing instructions that enable said processor-based device to receive an enhanced television transmission including a trigger that points to a resource and has an expires attribute indicating a trigger expiration time and enable the resource to be accessed after the trigger expiration time.
- 24 (Original). The system of claim 23 wherein said system is an enhanced television receiver with a broadcast recording device.

- . 25 (Original). The system of claim 23 wherein said system is an enhanced television rebroadcast system.
- 26 (Original). The system of claim 25 wherein said storage stores instructions that difference the trigger expiration time and the enhancement start time.
- 27 (Original). The system of claim 26 wherein the trigger is discarded if the trigger has expired.
- 28 (Original). The system of claim 23 wherein said storage stores instructions that enable said system to receive enhanced television transmission having a trigger that refers to a remote resource, access said remote resource and store said remote resource.
- 29 (Original). The system of claim 28 wherein said storage stores instructions that enable said system to convert a type A transmission to a type B transmission.
- 30 (Original). The system of claim 28 wherein said system makes said resource available at a new location and translates said trigger to point to said new location.
